

1/25/22 – All Boards at Tillotson Center

Thank you for coming. It's nice to have all of the boards in the same room.

Year ago Colebrook Board discussed solutions in reference to growing enrollment and potential future growth. Decision was made to move forward with "Phase II" of the original building project .

This project has been focused solely on the current and projected future student population.

One of the collaborative committee's recommendations is for the local boards to work together on regional issues.

Tonight's gathering is an opportunity for us board members to start working together.

One of the major reasons in choosing an Interstate School District was around the goal of sharing the cost of buildings, building additions or building improvements. Without that structure it requires a single district to put up the capital investment.

If there was more movement on the regional work the need for requesting a CTE center in conjunction with the Colebrook project would not be necessary. We would be able to combine resources and just expand on the strengths of each school.
